

## Indoor Displays

### File Specifications

Files should be submitted in: high resolution TIFF, JPEG or PSD format; Illustrator (vector graphics) saved in AI or EPS format; raw InDesign files (packaged to include all links and fonts); or PDF files.

When submitting InDesign or Illustrator files, please include a PDF or JPEG file for proofing so we can verify that no translation issues have occurred in transferring your file to our system.

Files from office programs such as Word, Publisher and PowerPoint are not recommended for layout. Files created in office programs must be converted to high resolution PDF files prior to submission, otherwise there will be an additional fee for file preparation or troubleshooting.

\*Upload your files at [www.scpgroup.net](http://www.scpgroup.net) by clicking on [Send Us a File](#).

### Resolution

High resolution images and graphics must be 300 dpi (dots/inch).

**Example:** A stock or digital camera photo is being used in your layout and it's raw file size is 4233 x 2834 (which equals 14.11" x 9.447") at 300dpi, it can be enlarged 300% without losing image quality. Enlarging any more than 300% and image degradation will occur. However, this degradation may not be noticeable in images being viewed from a distance. **Digital photographs and scanned photos that are under 300dpi cannot be changed to high resolution.**

### Bleeds

Bleeds are not required for banner stand graphics.
